SSL	<input checked="" type="checkbox"/>	×	×
Price	\$29.99	\$14.99	\$4.99
	<div>Purchase</div>	<div>Purchase</div>	<div>Purchase</div>

Basecamp uses hovers over the various metrics/features to give a bit more detail as to what the numbers mean. I think we should steal this.

Choosing to purchase will send you to the PayPal flow so we should use the PayPal buttons.

Authorize

Signup for sprint.ly - Authorize your GitHub account

http://sprint.ly/signup/authorize

Signing up takes just a few seconds. If you run into a snag, we've included walkthrough videos on the right.

1. Enter your GitHub username.

2. Enter your GitHub API key.

Authorize via GitHub

These two images will be screenshots of how to find the username. When clicked a jQuery thickbox window will popup with a

This will be a signup video explaining that you enter your GitHub username, API token, and we authorize you. This basically will show the user how to get through this step of the signup.

Account

Signup for sprint.ly - Create your sprint.ly account

http://sprint.ly/signup/account

Welcome, **username**. Let's get your sprint.ly account created. Next up is importing your GitHub repositories.

Your Name

Your email address

Enter a password

And again to be sure

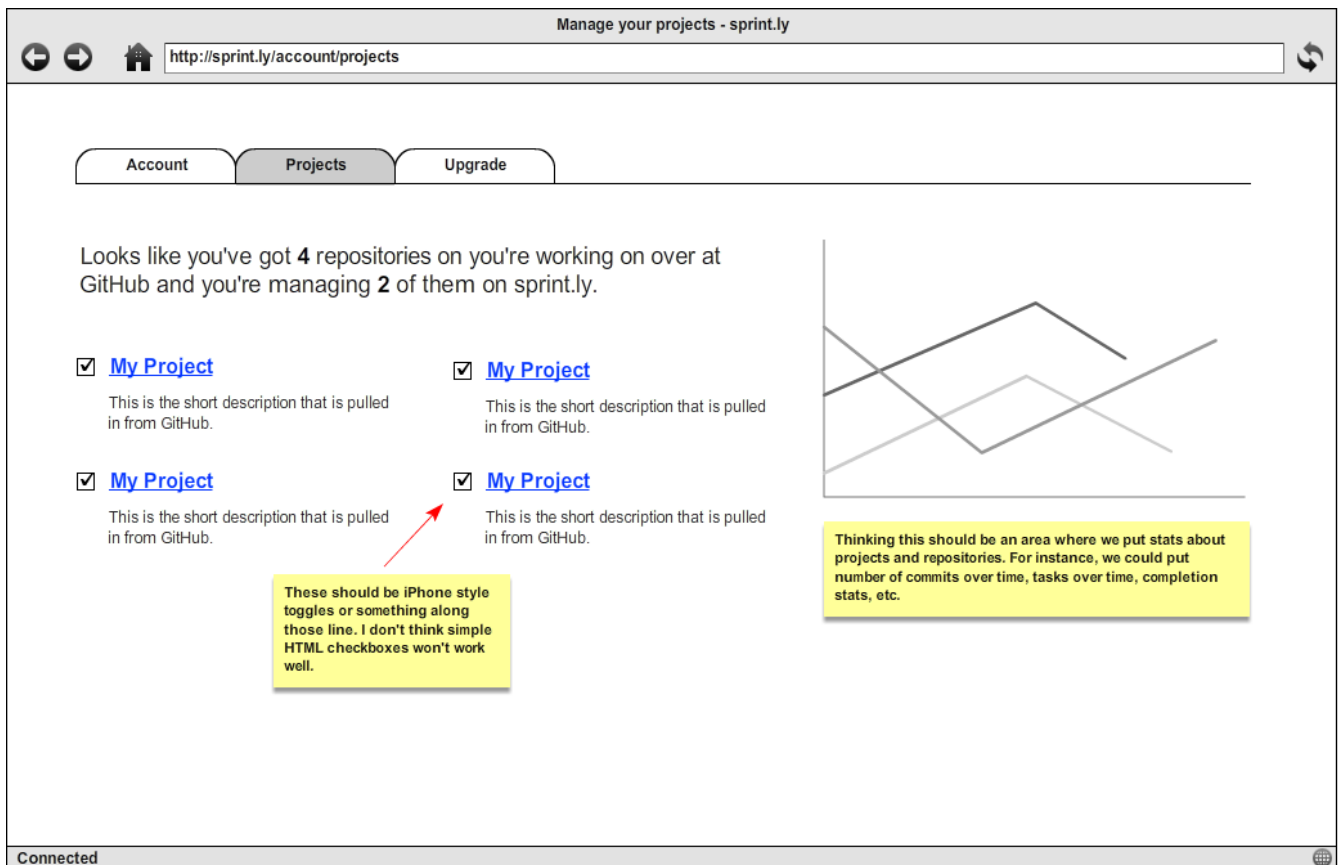

Create your sprint.ly account

Their name and email address should be pre-filled in via the GitHub API.

This will be a video explaining that after creating the account you'll be able to choose which repositories you can import into the website as projects.

Would like a Basecamp style calendar of upcoming deadlines here. Maybe a play on days left until the sprint is done? Most sprints are 1-2 weeks. 30 days on the high end.

📘 Create a test that exercises my_function().

Added by [Joe Stump](#) about 3 hours

📘 Create a test that exercises my_function().

Completed by [Derek Smith](#) about 4 hours ago

Projects have sprints. Sprints are made up of features. Features are made up of tasks, tests, and bugs (items). Attached to items are comments, code commits, changes in status (e.g. closed, hours, etc.), links, and files.

In the project overview page we should only show when a feature is added/deleted/completed, an iceboxed feature is added/deleted, or a top-level item is added/deleted/completed.

Completed items should be struck through with green. Maybe we don't show deleted items, but I think we should struck through with red as an audit trail. It's important to know when things are deemed too dumb/bad to even be considered I think.

We should use appropriate icons for what type of thing it is; feature or item.

Burndown chart.

Commits this sprint by person.
